	CreateAccount(U,P) →	
	← return account info	

Ticket Confirmation Use Case

User	interface	Account	Event	Ticket
operates →				
	login →			
	← return account info			
	eventSearch() →			
	← return	events		
	eventPurchase() →			
		CreateTicket() →		
		← ticketConfirmation()		
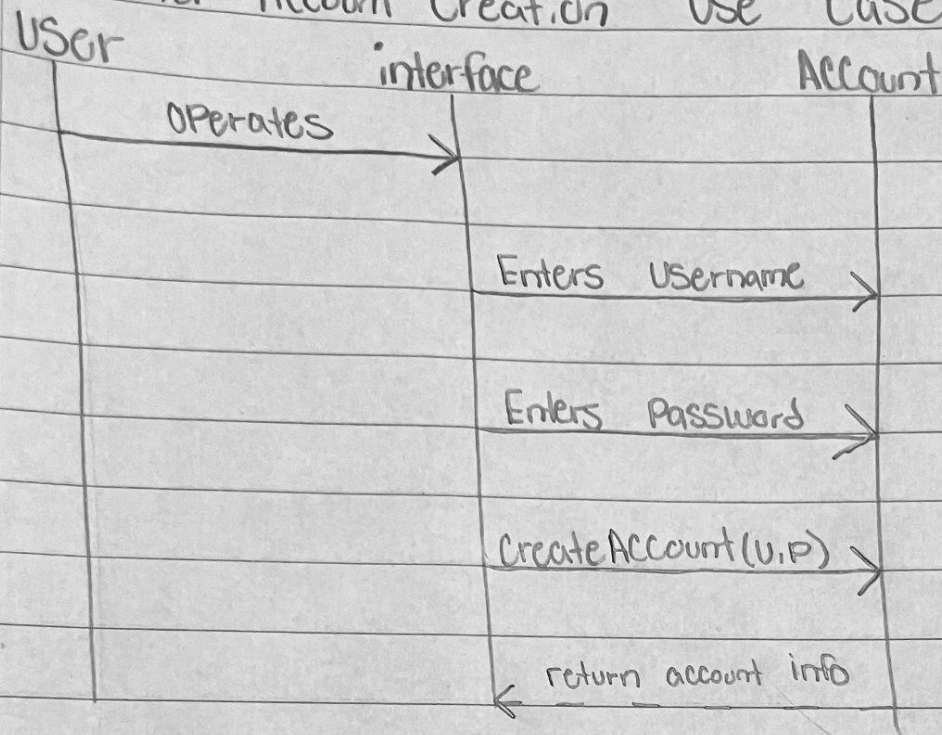

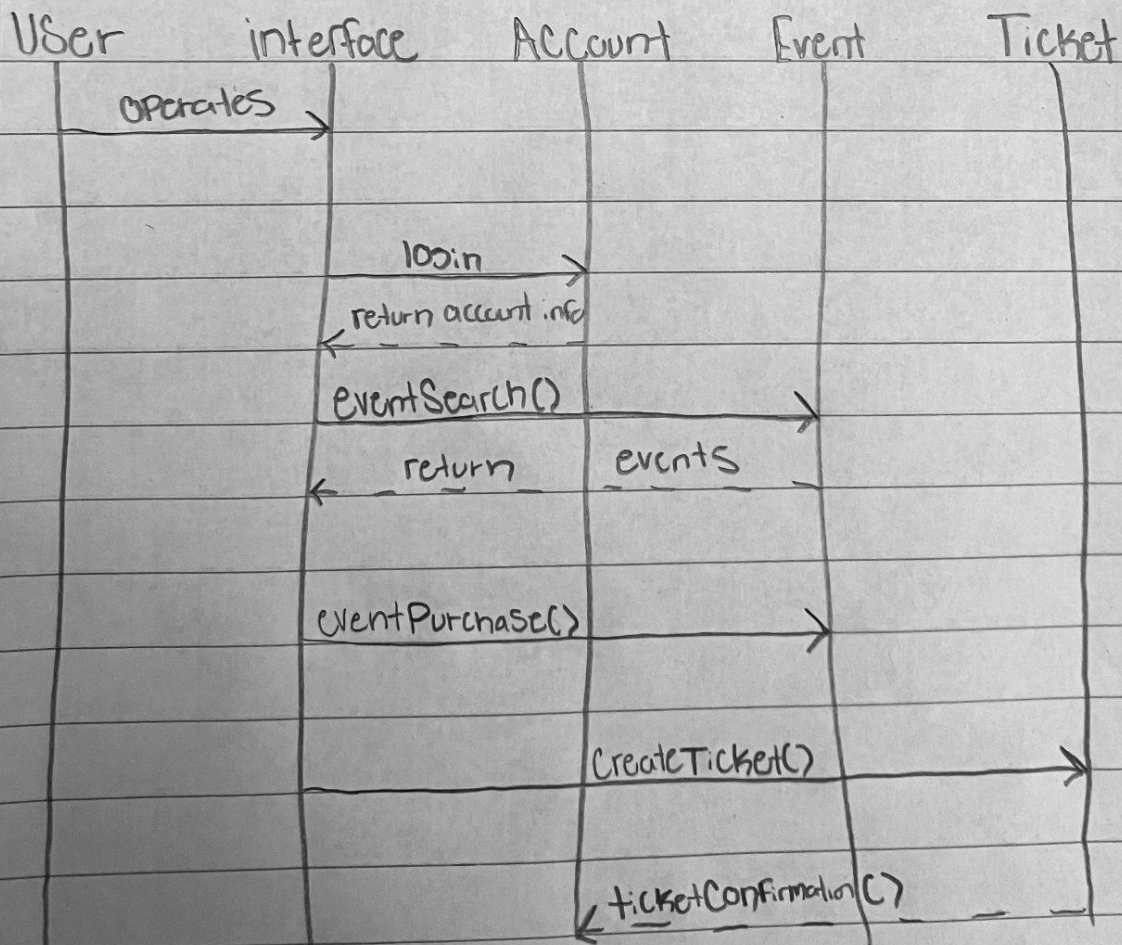

Functions

CreateAccount ()

EventSearch ()

EventPurchase ()

ticketconfirmation ()

Limit ticket amount ()

MultipleAccountCheck()   Strech goal

CreateTicket()
Pre condition: User has Successfully Paid for
a valid event

Post condition: an instance of a ticket
with details of Corresponding event is Created.

was a misuse case. wasn't shown in ssd for
ticket Confirmation use case. its a function inside
of eventPurchase(). it Checks to See if
You are attempting to buy more tickets for
an event than is allowed. if so you get a custom
error messase. else you are allowed to complete
your ticket Purchase.
